Rider Levett Bucknall Limited

INTRODUCTION OF ORGANISATION

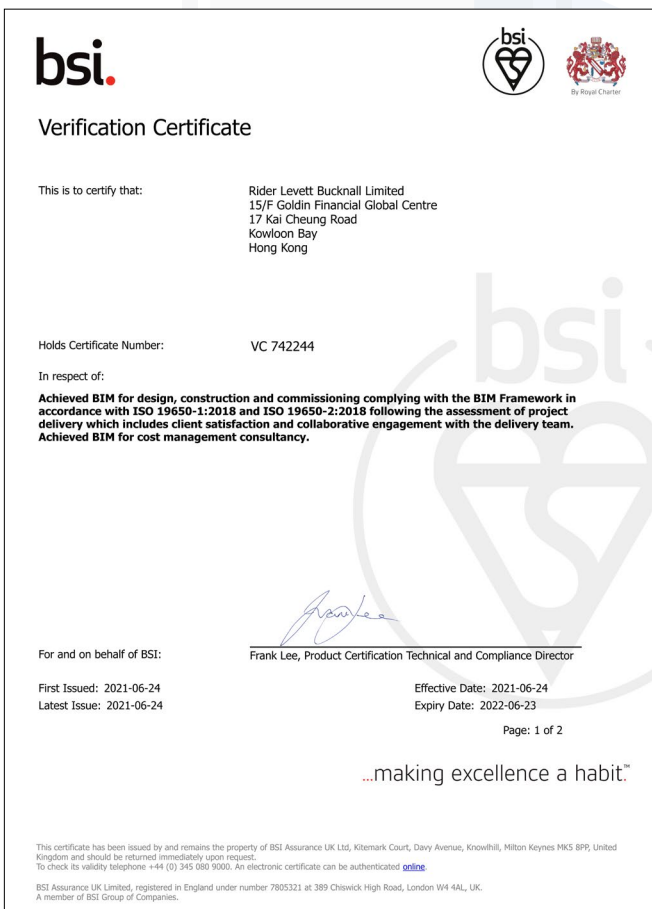

Established in 1962, Rider Levett Bucknall Limited (RLB) has grown with the economic expansion of Hong Kong until today it is one of the largest independent global professional practices with about 4,000 people operating from more than 120 offices. We offer a full spectrum of professional services ranging from cost consultancy and quantity surveying to project management and advisory professional services. We always strive to create value through achieving our clients' goals using the highest professional standard. We are committed to continual research and development, with digital transformation being our foremost objective in recent years.

THREE WINNING FACTS

Quantity Surveyors have always been looked upon as being passive in technology advancement, relying on hard copy documents and drawings supplied by others and producing bills of quantities and reports in hard copy format. We have recognised this has to change and transformed ourselves within just a few years into an organisation fully embracing digitalisation in the delivery of our services. RLB Hong Kong was certified in June 2021 as the first Quantity Surveying/Cost Consultant firm in Hong Kong to achieve ISO 19650 certification. This demonstrates our commitment to leading the implementation of BIM and emerging technologies that support cost planning, procurement and cost management throughout the whole project cycle.

With vast experience in working with different stakeholders across a variety of platforms using BIM and information technologies, RLB published "RLB 5D BIM Standards for Use in Hong Kong" in November 2020 for all stakeholders, up and down the supply chain. This is a set of standard document which serves as a communication bridge between the quantity surveyor's measurement rules and the BIM naming convention. The publication demonstrates our willingness to share our knowledge with the industry as part of our mission to create an open and collaborative working environment.

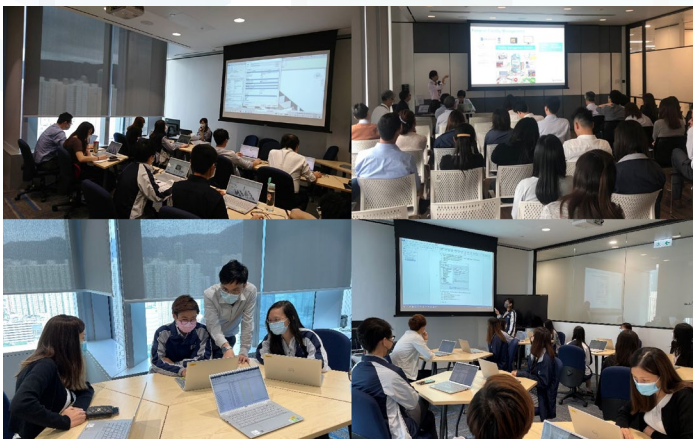

We launched our own RLB e-Tendering System in 2021 which provides a user-friendly, Internet-based means for suppliers or contractors to receive tender invitations and to submit tenders in response of these invitations including BIM delivery. Together with other previously already deployed E-Tendering modules, our e-Tendering solution integrates all parts of the tendering process in a digital and green environment. This demonstrates our investment in innovative research and development to streamline our business processes and enhance them with digital assets.

ISO 19650 is about information management. It is an assessment of project delivery which includes client satisfaction and collaborative engagement with the delivery team.

Launched in November 2020, RLB 5D BIM Standards share professional knowledge and expertise for all stakeholders in the industry

We aim to create a coherent learning atmosphere and digital environment in the company, and to cultivate talents with fresh perspectives

From 2019 to 2021, more than 2,000 people joined our seminar, experience sharing or CPD. We aim to promote BIM to industry practitioners
